

GameScope QA Test Report

Test Session Information

Date: November 11, 2025
Tester: Liam Wood
Environment: Development (Dev)
URL: gamescope.s3-website-us-east-1.amazonaws.com
Test Status: Blocked - Critical bugs prevent further testing

Executive Summary

Total Test Cases: 8
Passed: 2
Failed: 5
Partial: 1
Blocked: Yes (Team creation functionality)

Critical Issues: 5 bugs identified, including false success messages and data not persisting
Enhancement Requests: 3

Test Cases

Test Case 1: Create Club PASSED

Objective: Verify club creation workflow with all required fields

Steps:

1. Login to GameScope
2. Navigate to dev environment
3. Click on Clubs
4. Click Add Club
5. Enter club details:
 - Club name: Newcastle
 - Short name: ufc
 - Owner name: [any]
 - Primary color: Black
 - Secondary color: White
 - Phone number: [entered]
 - Email: leam.wood@yahoo.com
 - Country: United Kingdom
6. Upload Newcastle United logo
7. Click Create Club

Expected Result: Club created with all details saved and displayed correctly

Actual Result:  Club created successfully. Name and country were correctly displayed and used for the filter.

Status: PASSED

Test Case 2: Create Team ❌ FAILED

Objective: Create a team for Newcastle United club

Steps:

1. Navigate to Teams section
2. Click Create Team
3. Enter team details:
 - Team name: Under 18
 - Short name: u18
 - Head coach: x
 - Assistant coach: y
 - Gender: Male
 - Age group: U18
 - Season: 25-26
4. Click Create Team

Expected Result: Team created and displayed in teams list

Actual Result: ❌ System displayed "Team created successfully" message but team does not appear in the list. Attempted to create the same team again with identical information - received success message again without duplicate error, indicating the team is not being saved to the database.

Status: FAILED - Critical blocker

Associated Bug: Bug #1

Test Case 3: Add User ❌ FAILED

Objective: Add a new user to the club with required fields

Test Variation: Initially tested without all required fields, then updated to include mandatory fields

Steps:

1. Navigate to Club → Club Users
2. Click Add User
3. Enter user details:
 - First name: Liam
 - Last name: Wood
 - Short name: Wood
 - Email: leam.wood@yahoo.com
 - Password: [any]
 - Gender: [selected]
4. Click Save

Expected Result: User created with only first name, last name, email, and password required. Other fields should be optional.

Actual Result: ❌ Received "Bad request exception" error. Testing revealed that "short name" field is incorrectly required when it should be optional.

Status: FAILED

Associated Bug: Bug #2

Test Case 4: Delete User ❌ FAILED

Objective: Delete a user (Liam Wood) from the club

Steps:

1. Navigate to Club → Club Users
2. Find user: Liam Wood
3. Click three dots menu
4. Click Delete User
5. Confirmation dialog appears: "Are you sure you want to delete Bob or Liam Wood? This player may be a part of active squads. Deleting this user will remove them from all teams."
6. Click "Yes, delete user"

Expected Result: User deleted from system permanently

Actual Result: ❌ System displayed "Liam Wood has been deleted successfully" but user was not actually deleted (confirmed in Test Case 5).

Status: FAILED

Associated Bug: Bug #3

Test Case 5: Verify User Deletion ❌ FAILED

Objective: Confirm user deletion by attempting to recreate the same user

Steps:

1. Navigate to Club → Club Users
2. Click Add User
3. Enter same details as deleted user:
 - First name: Liam
 - Last name: Wood
 - Short name: Wood
 - Email: leam.wood@yahoo.com
 - Password: [any]
4. Click Create User

Expected Result: User should be created successfully since previous user was deleted

Actual Result: ❌ Received error: "Email already exists" - confirming that the user was never actually deleted despite success message.

Status: FAILED - Confirms Bug #3

Associated Bug: Bug #3

Test Case 6: Multiple Users with Different Roles ⚠️ PARTIAL

Objective: Create multiple users with different roles and verify summary tabs display correct information

Steps:

1. Create three users:
 - Test 1: Player role
 - Test 2: Admin role
 - Test 3: Coach role
2. Check Club User Management summary tabs for accurate counts

Expected Result: Summary should show:

- Total users: 3
- Role breakdown: 1 admin, 1 coach, 1 player
- User status: 3 active, 0 retired, 0 suspended

Actual Result: ⚠️ Partial success:

- ❌ Total users: Shows 4 (incorrect - should be 3)
- ✅ Role breakdown: 1 admin, 1 coach, 1 player (correct)
- ✅ User status: 3 active, 0 retired, 0 suspended (correct)
- ✅ Grouping works correctly on the Club User Management screen

Status: PARTIAL - Functionality works but count is incorrect

Associated Bug: Bug #4

Test Case 7: Filter Users by Role ✅ PASSED

Objective: Verify filtering functionality for user roles and status

Steps:

1. Click Enable Filter
2. Test role filters:
 - Admin
 - Coach
 - Players
 - Sub Admin
3. Test status filter:
 - Active

Expected Result: Filters should correctly display users matching selected criteria

Actual Result: ✅ All filters work correctly. Users are properly filtered by role and status.

Status: PASSED

Test Case 8: Change User Status FAILED

Objective: Change user status from Active to Suspended

Steps:

- 1. Navigate to Club → Club Users
- 2. Click on Test 2 user (admin role)
- 3. Click Edit
- 4. Change Account Status from Active to Suspended
- 5. Click Save

Expected Result: User status changes to Suspended and summary reflects the change

Actual Result:  System displayed "User details updated successfully" but the user's account status remains Active. No actual change was applied.

Status: FAILED

Associated Bug: Bug #5

Bugs Identified

Bug #1: Team Creation Shows Success But Doesn't Save CRITICAL

Severity: Critical - Blocks all team-related testing

Component: Teams

Type: Data Persistence

Description:

When creating a team, the system displays "Team created successfully" message but the team does not appear in the teams list and is not saved to the database.

Steps to Reproduce:

- 1. Navigate to Teams
- 2. Fill in all team details (name, short name, coaches, gender, age group, season)
- 3. Click Create Team
- 4. Observe success message but no team displayed

Evidence:

Attempting to create the same team again with identical information results in another success message without a duplicate error, confirming the team is not being saved.

Impact: Blocks all downstream testing of team-related features (squad management, fixtures, player assignments, etc.)

Bug #2: User Creation Validation and Error Handling HIGH

Severity: High

Component: User Management

Type: Validation / Error Messaging

Description:

Two issues identified:

- 1. "Short name" field is incorrectly required when it should be optional
- 2. Error message "Bad request exception" is not user-friendly or informative

Steps to Reproduce:

- 1. Navigate to Club → Club Users → Add User
- 2. Enter only required fields: First name, Last name, Email, Password (without Short name)
- 3. Click Save
- 4. Observe "Bad request exception" error

Expected Behavior:

- Short name should be optional
- Error messages should clearly indicate which fields are required

Impact: Prevents user creation and provides poor user experience with unclear error messaging

Bug #3: User Deletion Shows Success But Doesn't Delete **CRITICAL**

Severity: Critical

Component: User Management

Type: Data Persistence

Description:

When deleting a user, the system displays "Liam Wood has been deleted successfully" but the user remains in the database.

Steps to Reproduce:

- 1. Navigate to Club → Club Users
- 2. Select a user and click Delete
- 3. Confirm deletion in dialog
- 4. Observe success message
- 5. Attempt to create a new user with the same email
- 6. Receive "Email already exists" error, confirming user was not deleted

Evidence:

Attempting to recreate the user immediately after deletion results in duplicate email error.

Impact: Users cannot be removed from the system despite confirmation messages. Data integrity concern.

Bug #4: User Count Calculation Incorrect **MEDIUM**

Severity: Medium

Component: User Management Summary

Type: Display / Calculation

Description:

The total user count displays 4 when only 3 users exist. Role breakdown and status counts are accurate.

Steps to Reproduce:

1. Create 3 users with different roles (1 admin, 1 coach, 1 player)
2. Check Club User Management summary tabs
3. Observe total showing 4 instead of 3

Observed Results:

- Total users: 4 (incorrect)
- Role breakdown: 1 admin, 1 coach, 1 player (correct)
- Status: 3 active, 0 retired, 0 suspended (correct)

Impact: Summary statistics are misleading. May indicate an issue with user counting logic or a ghost user in the system.

Bug #5: User Status Change Shows Success But Doesn't Update ● **HIGH**

Severity: High
Component: User Management
Type: Data Persistence

Description:
When changing a user's status from Active to Suspended, the system displays "User details updated successfully" but the status remains Active.

Steps to Reproduce:

1. Navigate to Club → Club Users
2. Click on a user
3. Click Edit
4. Change Account Status from Active to Suspended
5. Click Save
6. Observe success message but status remains Active

Pattern: This follows the same false success message pattern as Bugs #1 and #3.

Impact: User status cannot be changed, affecting user management capabilities and potentially security/access control.

Bug Pattern Analysis

Critical Pattern Identified: Multiple features (team creation, user deletion, status updates) display false success messages while failing to persist data to the database. This suggests a systemic issue with:

- Database transaction handling
 - Success/error response logic
 - Frontend-backend communication
 - Data validation before save operations
-

Enhancement Requests

Enhancement #1: Add Search Functionality to DevOp Clubs

Priority: Medium
Component: DevOps - Clubs Section

Description:

Add search capability to the DevOp Clubs section to allow searching for clubs by club name.

Rationale:

As the number of clubs grows, finding specific clubs becomes difficult. Search functionality will improve usability and efficiency.

Suggested Implementation:

- Search bar at top of clubs list
 - Real-time filtering as user types
 - Search by club name (expandable to short name, country in future)
-

Enhancement #2: Add Visual Indicators for Mandatory Fields

Priority: High

Component: User Management - Add/Edit User Forms

Description:

Add asterisks (*) next to mandatory fields to clearly indicate which fields are required.

Affected Fields:

- First name *
- Last name *
- Email address *
- Password *

Rationale:

Currently, users must attempt to save and receive errors to discover which fields are required. Visual indicators improve user experience and reduce errors.

Suggested Implementation:

- Red asterisk (*) next to field labels
 - Optional: Add "* Required field" legend at form top
-

Enhancement #3: Add Club Deletion Functionality

Priority: Medium

Component: Club Management

Description:

Add the ability to delete clubs from the system.

Rationale:

Complete CRUD (Create, Read, Update, Delete) operations should be available for clubs. Currently, clubs can be created but not deleted.

Suggested Implementation:

- Delete option in club management menu
- Confirmation dialog with warning about cascading effects (teams, users, data)
- Consider soft delete vs hard delete for data retention

Testing Blockers

Current Blocker: Team creation functionality (Bug #1) is preventing all downstream testing of team-dependent features including:

- Squad management
- Fixture creation
- Player assignments to teams
- Team statistics
- Match analysis
- Team-level user permissions

Recommendation: Prioritize fixing Bug #1 (team creation) before resuming comprehensive QA testing.

Recommendations

Immediate Actions (P0 - Critical)

1. **Fix Bug #1:** Team creation persistence issue - blocks all further testing
2. **Fix Bug #3:** User deletion not working - data integrity concern
3. **Fix Bug #5:** User status changes not persisting - affects access control

High Priority (P1)

1. **Fix Bug #2:** User creation validation and error messaging
2. **Implement Enhancement #2:** Add mandatory field indicators
3. **Investigate pattern:** All bugs follow "false success message" pattern - suggests systemic issue

Medium Priority (P2)

1. **Fix Bug #4:** User count calculation
2. **Implement Enhancement #1:** Club search functionality
3. **Implement Enhancement #3:** Club deletion feature

Testing Strategy

1. Implement comprehensive error logging to capture actual errors vs displayed messages
 2. Add database verification checks after all create/update/delete operations
 3. Implement automated tests for CRUD operations to catch regression
 4. Consider adding a "developer mode" that shows actual API responses
-

Test Environment Notes

- Testing was conducted in the development environment
 - All tests were performed through the web interface
 - No API-level testing was conducted
 - Database state was not directly verified (relied on UI feedback)
-

Appendix: Test Data Used

Club Created:

- Name: Newcastle
- Short Name: ufc
- Primary Color: Black
- Secondary Color: White
- Country: United Kingdom
- Email: leam.wood@yahoo.com

Team Attempted:

- Name: Under 18
- Short Name: u18
- Head Coach: x
- Assistant Coach: y
- Gender: Male
- Age Group: U18
- Season: 25-26

Users Created:

- Liam Wood (various roles tested)
- Test 1 (Player role)
- Test 2 (Admin role)
- Test 3 (Coach role)

Report Generated: November 11, 2025
Report Status: Testing suspended pending bug fixes
